Controls and Accessories

For Automated Control of Industrial Sound Signals

## Model M-415 Signal Controller

The M-415 Signal Controller is a fully enclosed, electronic device which provides for programming and control of 7 day or full year timed signals. A solid state time switch permits 1000 ON/OFF set points on independent daily schedules through a 7 day time period and across 99 separate holiday schedules. A factory installed field replaceable lithium battery maintains accurate time keeping and calendar information for a minimum of 8 years.
